

THE INTERN'S SURVIVAL TOOLKIT

You will need it every day.
To be a professional developer,
you need the right tools.
Here is your setup guide for Week 1.

1. THE ESSENTIAL SETUP

(Download These First)

VS Code: The industry-standard code editor.

Download: code.visualstudio.com

Git SCM: Required for version control and GitHub.

Download: git-scm.com

Decodelabs.tech

2. VS CODE CHEAT CODES (Work Faster)

Stop using the mouse! Memorize these:

Ctrl + ~ : Opens the Terminal instantly.

Ctrl + / : Comment/Uncomment multiple lines.

Shift + Alt + F : Auto-format messy code (Life saver!).

Ctrl + P : Find any file in your project instantly.

3. THE LEARNING VAULT (Work Faster)

Stuck on a concept? Use these
"Gold Standard" references for your domain:

 **Python:** roadmap.sh/python (Complete Roadmap)

 **Java:** dev.java/learn (Official Docs)

 **Web Dev:** w3schools.com (Best for HTML/CSS/JS)

 **Data Analytics:** kaggle.com/learn (Free Micro-Courses)

 **AI/ML:** fast.ai (Practical Deep Learning)

DIRECTOR'S TIP:

"Don't try to memorize syntax.

Good developers don't memorize; they understand logic and Google the syntax. If you get an error, read it. The solution is usually in the error message itself!"

Set up your machines today. We start grinding tomorrow! 

THANK YOU
